UniDock®

UniDock® Intelligent Docking Stations:
Smaller design. Bigger payoff.

Fleets of shared mobile devices must stay charged, synced and ready to work at all times. Our newest generation UniDock Intelligent Docking Station replaces unwieldy charging setups with a compact, high-density intelligent design that does more—with less.

25% more

MORE DEVICES. LESS SPACE.

Make the most of busy workspaces with a smaller overall design that charges, manages and syncs 25% more phones per dock.*
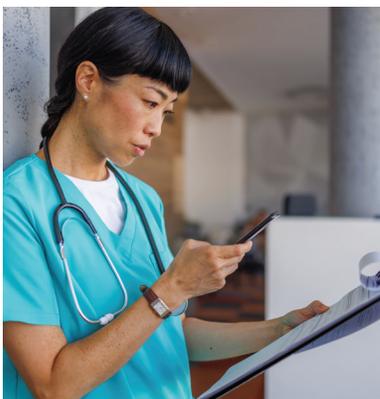

MORE SIMPLICITY. LESS STRUGGLE.

Reduce user and support burden with patented drop-and-go technology that replaces cable chaos with one simple action.

MORE ROI. LESS BUDGET STRESS.

Optimize your fleet investment with a lower price per port and simple integration into MDM and MAM-managed workflows.

In healthcare, every second counts. We make it fast and simple to keep essential devices charged and ready—reliably.

UniDock® products manage over 1 million healthcare devices worldwide.

Mobile devices improve efficiency and customer experiences in retail— that's why we ensure they are always ready to work for you.

UniDock® products power up one of the nation's largest athletic apparel companies.

*Compared to our Gen 2 offering.

Specifications

**UniDock® is the first drop-and-go charge and sync solution for mobile devices.
Each Gen 3 Intelligent Docking Station offers:**

- **Patented drop-in technology** for zero-touch user consistency
- **Cable-free simplicity;** no cable chaos
- **Flexibility for different devices,** including iOS, Android, Windows and Linux devices
- **Adjustable guides to fit nearly any device,** with or without case
- **Durability for demanding environments,** including durable steel construction and scratch-resistant tops

- **Open-API** for fully customizable application development
- **Enhanced application features,** including Single Sign-On (SSO), zero-touch device enrollment and device data wipe
- **Future-proof investment protection** with field-upgradeable firmware and interchangeable connectors; optional support for plug-in devices based on fleet requirements
